Out West supply side opinions delivered by a pony express that now and then makes it through an ambush at Flash Hackers Gap

Sorry, for this convoluted way to protect both sender and receiver from big business bullies wanting to destroy the small business communication tool known as a "free Internet". Which started for me back in 1985 as an Information Exchange Highway designed as a way for research universities, government agencies, and USA businesses to network. The idea was to survive an attack on a US cyber connection. Hopefully, the 2020 election will change election rules favoring those in control, thanks to SuperPac funding, of the FCC and FTC, EPA and USDA, etc. in collusion with ?? , and the two percent who pretend to swear allegiance to their best interests of the United States of America.
